Auto-save of all transferred inspection results

When enabled the software will automatically save all transferred inspection results after each new inspection report is transferred to the VCIR software

Automatically generate daily job reports (at a settable start/stop time)

When enabled the software will automatically save all transferred inspection results after each new inspection report is transferred to the VCIR software, then at the programmed "daily hour"; the VCIR software will close the existing job and open a new job. This provides for a single Job file for each day making it easy to archive job reports and easy review at a later date.

Ability to add a default Prefix to job names

The default file name is the date and time when the job is saved. When a "Prefix" is provided it will apply this to the file name.

Example: Prefix = "Press1", so the job file name will be *Press1 <YYYYMMDD.HHMMSS>.rjv*

Ability to add a default Suffix to job names

The default file name is the date and time when the job is saved. When a "Prefix" is provided it will apply this to the file name.

Example: Suffix = "JohnDoe", so the job file name will be <YYYYMMDD.HHMMSS>JohnDoe.rjv

Ability to hide the Erase button from the main screen

This allows for a method to restrict who has access to deleting inspection reports from the VCIR database and prevents accidental deletion.
